## INTERSON RELEASES NEW SEEMORE SOLUTIONS

### Enhancing Capabilities and Image Quality

Pleasanton, CA, August 1, 2013 – Interson announced today the availability of a new version of SeeMore Windows software. The software includes a number of features that have been developed and integrated in response to customer feedback and partner requests. Support for newest generation USB ultrasound imaging devices that provide enhanced image quality has also been included.

*"Release of these new software features, and support for our newest generation of USB ultrasound imaging probes, is in line with our objective to introduce significant market leading improvements twice each year" Bill Wiedemann, Director of Sales and Marketing*

Interson's next-generation probes provide the image quality necessary for a variety of point-of-care applications. As computing power has continued to progress, Interson's open architecture solutions can now provide the capabilities and features that previously could only be addressed by more expensive proprietary closed architecture solutions. SeeMore Windows imaging software now supports Windows 8 ultrabooks and tablets, and includes support for network attached patient data storage, improved patient reporting, and automatic sizing of the optimal imaging window. Additional measurement functions for easier calculation and annotation of images have been added for OB GYN, urologists, and long-term-care bladder scanning.

*"I have been using the SeeMore system for three months now and I love it! It is very easy to use and provides great imaging for such a small system. My obstetrical patients really appreciate the convenience and reassurance of office based ultrasound. This is an essential tool in modern obstetrics." -- Robert C. Kennedy, MD*

Interson Corporation, an ISO certified, privately held corporation located in Silicon Valley, is a leading U.S. manufacturer of ultrasound imaging solutions. Ultrasound systems using Interson products have been installed in offices, hospitals, and clinics around the world since 1989. Interson probes are designed and manufactured in the U.S.A. and have FDA 510(k), a CE mark by TUV Rhineland, Japan PAL NINSHO approval, and a medical device license from Health Canada. Recognized as one of the top ten innovations of the year by the International Academy of Science, SeeMore probes extend clinicians' vision beyond their fingertips.
